Bug Report

Generated: July 11, 2026

Sources: Live API server logs + frontend-vs-backend code audit

Bug Summary

2

Critical

1

High

2

Medium

2

Low/Info

Total open bugs: 7 · 3 confirmed live in production logs · 4 found by code audit

Report Contents

This report covers all open bugs as of July 11, 2026, found via live API log analysis and a full frontend-vs-backend code audit.

Page 2	Report Contents This page.
Page 3	BUG-001 · CRITICAL Contacts page — entire page broken: GET /v1/contacts returns 404 (confirmed live).
Page 3	BUG-002 · CRITICAL Invoices — Mark as Paid / Mark as Sent always fails: PATCH /v1/invoices/:id missing.
Page 4	BUG-003 · HIGH Quotes — Convert to Sales Order always fails: POST /v1/quotes/:id/convert missing.
Page 4	BUG-004 · MEDIUM Reports — Purchasing pipeline chart shows Sales data (wrong analytics endpoint).
Page 5	BUG-005 · MEDIUM Contacts — Create new contact is broken (POST /v1/contacts missing).
Page 5	BUG-006 · LOW Reports — Client risk score uses oversimplified days-overdue logic.
Page 5	BUG-007 · INFO Accessibility — DialogContent missing aria-describedby (4 console warnings).
Page 6	Fix Priority Summary Recommended order and effort estimates for all 7 bugs.

Critical Bugs

BUG-001 Contacts page fails to load — entire page broken

CRITICAL

Module: CRM / Contacts

REPRODUCED IN LIVE LOGS

SUMMARY

The standalone Contacts page (/contacts) calls GET /v1/contacts and POST /v1/contacts to list and create contacts globally. The backend has no such endpoints — contacts are only accessible nested under a client: GET /v1/clients/:clientId/contacts. Every visit to /contacts shows an empty list and create/delete actions fail silently.

STEPS TO REPRODUCE

1. Log in and navigate to CRM !' Contacts.
2. Observe the page loads but shows no data.
3. Click "New Contact" and submit — the mutation fires POST /v1/contacts which returns 404.
4. Confirmed: GET /api/v1/contacts returned 404 four times in today's live API logs.

ROOT CAUSE

Route mismatch: contacts.ts only registers /v1/clients/:clientId/contacts (nested). The Contacts page was built expecting a flat /v1/contacts list endpoint that was never added.

IMPACT

The entire Contacts page is non-functional. All contacts across all clients are invisible to users from this view. Creating or deleting contacts from this page silently fails.

FIX

Add GET /v1/contacts (list all contacts for the company) and POST /v1/contacts (create a standalone contact, client association optional) to contacts.ts.

FIX EFFORT

Small — ~1-2 hours. Pattern already exists in clients.ts and leads.ts.

BUG-002 Mark as Paid / Mark as Sent buttons always fail

CRITICAL

Module: Finance / Invoices

SUMMARY

The Invoices page has two action buttons — Mark as Sent and Mark as Paid — that fire PATCH /v1/invoices/:id to update invoice status. The invoices route file only implements GET (list) and POST (create). No PATCH handler exists, so both buttons always return 404 and the invoice status never changes.

STEPS TO REPRODUCE

1. Navigate to Finance !' Invoices.
2. Select any invoice.
3. Click "Mark as Sent" or "Mark as Paid".
4. Observe: toast shows error, invoice status unchanged in the list.

ROOT CAUSE

invoices.ts only has router.get('/v1/invoices') and router.post('/v1/invoices'). The PATCH handler for /v1/invoices/:id was never implemented.

IMPACT

Invoice workflow is broken at a critical step. Users cannot progress invoices from Draft !' Sent !' Paid through the UI. Financial tracking and AR aging data will be permanently stale.

FIX

Add router.patch('/v1/invoices/:id') handler to invoices.ts that updates status and any other passed fields, using the same pattern as quotes.ts PATCH.

FIX EFFORT

Small — ~1 hour. Direct copy of the pattern in quotes.ts.

High & Medium Bugs

BUG-003 Convert Quote to Sales Order button always fails

HIGH

Module: CRM / Quotes

SUMMARY

When a quote's status is set to Accepted, a "Convert to Sales Order" button appears in the quote detail drawer. Clicking it fires POST /v1/quotes/:id/convert. This endpoint does not exist — only /v1/leads/:id/convert exists. The action always fails with a "Conversion failed" toast.

STEPS TO REPRODUCE

1. Navigate to CRM !' Quotes.
2. Create or open a quote with status set to Accepted.
3. Click "Convert to Sales Order".
4. Observe: destructive toast "Conversion failed" appears. No Sales Order is created.

ROOT CAUSE

quotes.ts has no /convert endpoint. The analogous leads conversion endpoint exists at /v1/leads/:id/convert (creates an Opportunity). A matching endpoint for quotes was never added.

IMPACT

Sales pipeline is broken at a key handoff point. Users cannot move an accepted quote into a Sales Order through the UI — they must manually create a Sales Order from scratch, re-entering all line items.

FIX

Add POST /v1/quotes/:id/convert to quotes.ts. It should create a Sales Order from the quote's line items and client, mark the quote as Converted, and return the new sales order ID.

FIX EFFORT

Medium — ~2-3 hours. Needs new business logic to map quote line items to sales order items.

BUG-004 Purchasing tab in Reports shows Sales pipeline data

MEDIUM

Module: Reporting & Analytics

SUMMARY

The Reports page has a "Purchasing" tab that is intended to show a Purchase Order pipeline breakdown. The chart calls GET /v1/analytics/sales-pipeline — the same endpoint used by the Sales tab — instead of a dedicated procurement analytics endpoint. The chart therefore shows sales stage counts labelled as PO stages, which is factually wrong.

STEPS TO REPRODUCE

1. Navigate to Reports !' Purchasing tab.
2. Observe the pipeline chart.
3. Compare the numbers with Reports !' Sales tab pipeline chart.
4. The values and stage labels are identical (or derived from the same data source).

ROOT CAUSE

analytics.ts has /v1/analytics/sales-pipeline but no /v1/analytics/purchase-pipeline. The frontend Purchasing chart was wired to the wrong endpoint.

IMPACT

Purchasing managers see incorrect PO stage data. Any decisions made on procurement pipeline status (how many POs are awaiting approval, GRN, etc.) will be based on sales figures instead.

FIX

Add GET /v1/analytics/purchase-pipeline to analytics.ts that queries purchaseOrders grouped by status. Update the Reports Purchasing chart to call the new endpoint.

FIX EFFORT

Medium — ~2 hours for new endpoint + frontend wiring.

Medium, Low & Info Bugs

BUG-005

Create Contact from Contacts page always fails

MEDIUM

Module: CRM / Contacts

REPRODUCED IN LIVE LOGS

SUMMARY

Related to BUG-001 but distinct: even after fixing the GET endpoint, the create action on the Contacts page fires POST / v1/contacts (flat create with no clientId in URL). The backend expects clientId as a URL param: POST /v1/clients/:clientId/contacts. Even if the backend flat-list GET is added, POST will still fail unless a flat create endpoint is also added.

STEPS TO REPRODUCE

1. Navigate to CRM !' Contacts.
2. Click "New Contact", fill in the form, submit.
3. Observe: the mutation fires POST /v1/contacts !' 404. Contact is not saved.

ROOT CAUSE

contacts.ts POST is at /v1/clients/:clientId/contacts. Contacts page sends POST /v1/contacts without a clientId in the path.

IMPACT

Users cannot create any contacts from the Contacts page. New contacts can only be added from within a Client detail view.

FIX

Extend the BUG-001 fix: when adding POST /v1/contacts, accept clientId in the request body (optional) rather than requiring it in the URL.

FIX EFFORT

Small — covered as part of BUG-001 fix.

BUG-006

Client risk score uses oversimplified logic

LOW

Module: Reporting / Finance

SUMMARY

The Finance tab's client risk indicator calculates risk based purely on days-overdue counting (how many days past due an invoice is). It does not factor in payment history, average days-to-pay, order volume, or dispute history. A client who paid late once is scored identically to a chronic late payer.

STEPS TO REPRODUCE

1. Navigate to Reports !' Finance tab.
2. Review the client risk column.
3. Two clients with very different payment histories may show the same risk label if their current overdue count matches.

ROOT CAUSE

The analytics endpoint computes a simple overdue-days threshold (>30 = medium, >60 = high) with no weighted scoring across multiple invoices or historical behaviour.

IMPACT

Risk scores are unreliable for credit decisions. Legitimate clients with one-off delays may be flagged; chronic late payers with recently cleared debts may show as low-risk.

FIX

Update the risk scoring query in analytics.ts to compute a weighted score: average days-to-pay across last 12 invoices, percentage of invoices paid late, and total overdue amount as a proportion of credit limit.

FIX EFFORT

Medium — ~3 hours. Pure backend SQL/logic change, no frontend update needed.

Module: UI / Accessibility

REPRODUCED IN LIVE LOGS

SUMMARY

The browser console logs show repeated warnings: "Warning: Missing Description or aria-describedby={undefined} for {DialogContent}". This is a Radix UI requirement — every Dialog must either include a `<DialogDescription>` child or explicitly pass `aria-describedby={undefined}` to suppress the warning. Confirmed in 4 console entries today.

STEPS TO REPRODUCE

1. Open any dialog in the app (e.g. New Lead, New Quote, New Invoice).
2. Open browser DevTools !' Console.
3. Observe the accessibility warning for each dialog opened.

ROOT CAUSE

Multiple dialog components across the app (leads.tsx, quotes.tsx, invoices.tsx, and at least one more) use `<DialogContent>` without a `<DialogDescription>` child or the suppression prop.

IMPACT

Screen readers and assistive technologies may not announce dialog purpose correctly. Affects WCAG 2.1 AA compliance. Also pollutes the console log, making it harder to spot real errors.

FIX

For each affected dialog, either add a `<DialogDescription>` with a brief description of the dialog purpose, or add `aria-describedby={undefined}` to the `DialogContent` if a description is not needed.

FIX EFFORT

Small — ~1 hour across all dialogs. Find all `DialogContent` usages with `grep` and add the missing prop.

Fix Priority Summary

Recommended fix order based on user-facing impact. Bugs are grouped into two sprints.

Sprint 1 — Fix Immediately (broken workflows)

BUG-001	Contacts page broken (GET + POST /v1/contacts missing)	~1-2 hrs
BUG-005	Contacts create fails (covered by BUG-001 fix)	~0 hrs
BUG-002	Invoices Mark as Paid / Sent (PATCH /v1/invoices/:id)	~1 hr
BUG-003	Quote !' Sales Order conversion (POST /v1/quotes/:id/convert)	~2-3 hrs

Sprint 2 — Fix Soon (data accuracy + polish)

BUG-004	Purchasing tab shows wrong pipeline data (new analytics endpoint)	~2 hrs
BUG-007	DialogContent aria-describedby warnings (accessibility)	~1 hr
BUG-006	Client risk scoring is oversimplified (weighted score logic)	~3 hrs

Total Estimated Fix Time

Sprint 1: ~4–6 hours · Sprint 2: ~6 hours · Grand total: ~10–12 hours of engineering work.

All Sprint 1 bugs are isolated backend additions — no database schema changes required. They can be fixed and deployed independently without risk to other features.
