

Customize Duniya

Application Overview

An end-to-end ERP for running a corporate gifting business — CRM, catalog, orders, warehouse, logistics and finance in one place.

Generated Tuesday, 9 June 2026

What is Customize Duniya?

Customize Duniya is a full-stack ERP purpose-built for corporate gifting companies. It covers the complete commercial workflow — from finding and qualifying a lead, quoting and winning the deal, sourcing and assembling the gift kits, to shipping, invoicing and collecting payment. Everything runs in a single web application with a live analytics dashboard, so sales, operations and finance teams work off the same real-time data.

The system is organised into eight functional areas spanning twenty-plus modules. All monetary values use Indian Rupees (₹) with GST-aware tax handling, making it suited to Indian operations.

At a Glance

- **8 functional areas** — Overview, CRM, Catalog, Orders, Operations, Logistics, Finance, Admin.
- **Real-time dashboard** — KPI cards, revenue trend, sales pipeline, top products, AR aging and a sales leaderboard.
- **Quote-to-cash** — Leads !' Opportunities !' Quotes !' Sales Orders !' Invoices !' Payments, fully linked.
- **Procure-to-receive** — Purchase Orders !' Goods Receipts (GRN) !' Inventory, with vendor tracking.
- **Warehouse & production** — Inventory, storage locations, kit assembly and artwork approval workflows.
- **Secure access** — Token-based login with role-aware user management.

Technology

Layer	Technology
Frontend	React + TypeScript, Vite, Tailwind CSS, Shadcn/UI (Radix)
Routing	wouter (lightweight client-side routing)
Data layer	TanStack Query with a generated, type-safe API client
Forms & validation	react-hook-form + Zod schemas
Charts & icons	Recharts for analytics, lucide-react for iconography
Backend	Express 5 (Node.js) REST API
Database	PostgreSQL with Drizzle ORM
Auth	Token-based (Bearer/JWT), route-guarded login

Modules by Functional Area

Overview

- **Dashboard** — Real-time business health: KPI cards, revenue trend & pipeline charts, top products, AR aging, sales leaderboard and top clients.

CRM — Customer Relationship Management

- **Clients** — Directory of corporate clients with search, industry filtering and contact details.

- **Client Detail** — 360° client view with contacts, interaction logging (calls/emails/meetings) and activity history.
- **Leads** — Pipeline of potential business across stages (New, Qualified, Proposal...) with estimated values.
- **Opportunities** — Qualified deals tracked by value, win probability and expected close date.
- **Quotes** — Line-item quotation builder with discounts, GST, validity dates and status (Draft / Sent / Accepted).

Catalog — Product Management

- **Products** — Master product list with pricing (cost/selling), categories and low-stock thresholds.
- **Bundles** — Gift-kit builder that groups products into curated sets, including a “Suggest Bundle” tool by occasion and budget.
- **Categories** — Hierarchical catalog organisation via names and slugs.

Orders & Procurement

- **Sales Orders** — Client orders through the fulfilment lifecycle (Draft !' Delivered) with multi-item entry and occasion tagging.
- **Sales Order Detail** — Status advancement, delivery addresses and internal notes.
- **Purchase Orders** — Vendor procurement, linkable to sales orders for back-to-back ordering.
- **Purchase Order Detail** — Tracks delivery and receipt progress against vendors.
- **Vendors** — Supplier directory with contact info, lead times and performance.

Operations & Warehouse

- **Inventory** — Stock monitoring with manual inward/outward adjustments and batch tracking.
- **Locations** — Warehouse bins, zones and storage types to optimise picking and placement.
- **Goods Receipts (GRN)** — Receive goods against POs with partial-receipt and quality-rejection logging.
- **Assembly** — Production tracking for building kits/bundles (Pending / In Progress / Completed).
- **Artwork** — Creative approval workflow for branding assets (logos, mockups) and client sign-off.

Logistics

- **Shipments** — Courier and delivery management linking sales orders to carriers and tracking numbers.

Finance

- **Invoices** — Tax invoices generated from sales orders with automated GST and due-date tracking.
- **Payments** — Accounts-receivable logging of advance, partial and full payments against invoices.
- **Credit Notes** — Returns and billing adjustments, issuing credit against client accounts.

Admin

- **Users** — Identity & access management — accounts and roles (Admin, Sales, Warehouse...).
- **Settings** — Global configuration: company profile, GST/PAN tax IDs and document number prefixes.

How the Pieces Connect

Quote-to-Cash

Lead !' Opportunity !' Quote !' Sales Order !' Invoice !' Payment. Each step carries data forward, so a won opportunity becomes a quote, an accepted quote becomes an order, and a fulfilled order becomes an invoice tracked through to payment.

Procure-to-Receive

A sales order can spawn a linked Purchase Order to a vendor. Goods are received via a GRN (supporting partial receipts and rejections), which updates Inventory. Kits are then built in Assembly and shipped via Logistics.
