

Customize Duniya

Dashboard — Detailed Notes

Corporate Gifting ERP · Reference guide to everything available on the Dashboard page

Generated Tuesday, 9 June 2026

Overview

The Dashboard is the landing page of Customize Duniya and provides a live, at-a-glance overview of your entire gifting operation. It pulls real-time data from the analytics API and is organized into four zones: a header with a global time-range filter, a row of six KPI stat cards, a pair of analytics charts (Revenue Overview and Sales Pipeline), three insight widgets (Top Products, Sales Leaderboard, AR Aging), and a Top Clients list. All monetary values are shown in Indian Rupees (₹) using the en-IN number format.

1. Page Header

- Title & date** — “Dashboard” heading with a live subtitle showing today's full date (e.g. Monday, 9 June 2026).
- Time-range selector** — A dropdown in the top-right that controls the Revenue Overview chart window. Options: Last 3 / 6 / 12 / 24 months. Default is 6 months.

2. KPI Stat Cards

A responsive grid of six colour-coded cards. Each shows an icon, a large value, a label, and a one-line hint. They update live from the dashboard-stats endpoint.

Card	What it shows	Hint
Total Clients	Count of active client accounts	Active accounts
Active Orders	Sales orders currently in progress	In progress
Pending Assembly	Gift kits awaiting build/assembly	Awaiting build
Overdue Invoices	Invoices past their due date	Need follow-up
Low Stock Items	Products below reorder threshold	Reorder soon
Pending POs	Open purchase orders with vendors	Open with vendors

3. Analytics Charts

Revenue Overview

An area chart plotting monthly revenue over the selected time range. The X-axis shows months; the Y-axis shows revenue formatted in ₹. The amber gradient fill reflects the brand accent. Hovering a point reveals an exact value tooltip.

Sales Pipeline

A horizontal bar chart breaking down opportunities by pipeline stage/status. Each bar's length represents the value at that stage, helping you spot where deals are concentrated or stalling.

4. Insight Widgets

Three cards sit in a row beneath the charts, each surfacing a focused operational insight.

Top Products

- **Purpose** — Ranks your best-selling products by revenue across all confirmed sales orders.
- **Details** — Shows up to 6 products with a medal-style rank badge (gold/silver/bronze for the top three), revenue in ¹, a proportional progress bar, and units sold.
- **Empty state** — “No sales data yet” when there are no confirmed orders.

Sales Leaderboard

- **Purpose** — Ranks sales owners by closed-won value plus open pipeline.
- **Details** — Each row shows a rank medal, owner initials avatar, name, role, count of open and won opportunities, total won value in ¹, and remaining pipeline value.
- **Empty state** — “No assigned opportunities yet”.

AR Aging (Accounts Receivable)

- **Purpose** — Shows how much money is outstanding and how overdue it is.
- **Details** — Displays the total outstanding amount, then breaks it into aging buckets — Current, 1-30, 31-60, 61-90, and 90+ days — each with a colour-coded bar (green !' red as overdue grows).
- **Empty state** — “No outstanding invoices” when nothing is due.

5. Top Clients

A list card at the bottom of the page ranking your highest-value clients. Each entry shows the client name, total number of orders, and total revenue in ¹. Displays “No client data available.” when empty.

6. Data & Behaviour Notes

- **Live data** — All sections fetch from the analytics API; figures reflect current database state, not cached snapshots.
- **Loading state** — While data loads, the page shows a “Loading dashboard...” placeholder.
- **Currency** — Every amount uses ¹ with Indian digit grouping (en-IN).
- **Interactivity** — Only the time-range dropdown changes what you see; charts have hover tooltips. Other tiles are read-only summaries — use the sidebar to drill into each module.
